

Haydn Surname Challenge!

Why don't you mix your daily exercise with some geography and use road names to spell out your surname.

Mrs Crawford did it using the Digimaps website. It's currently free and an excellent resource for children (and grown ups!) to practise their map skills.

As this is a school account, all maps will be visible to any child who signs in. Please bear this in mind when saving your data to the map.

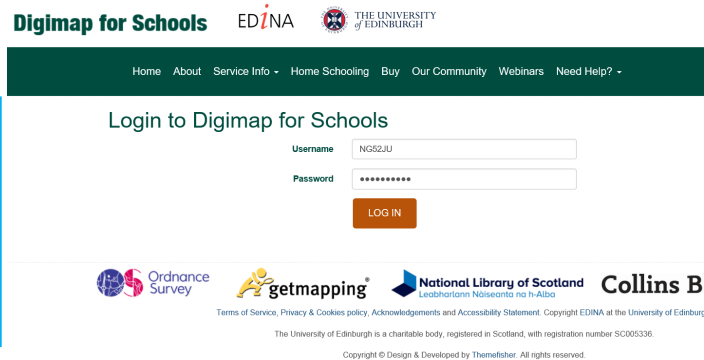

Step 1: find Digimaps for schools login page

Step 2: login!

Username:

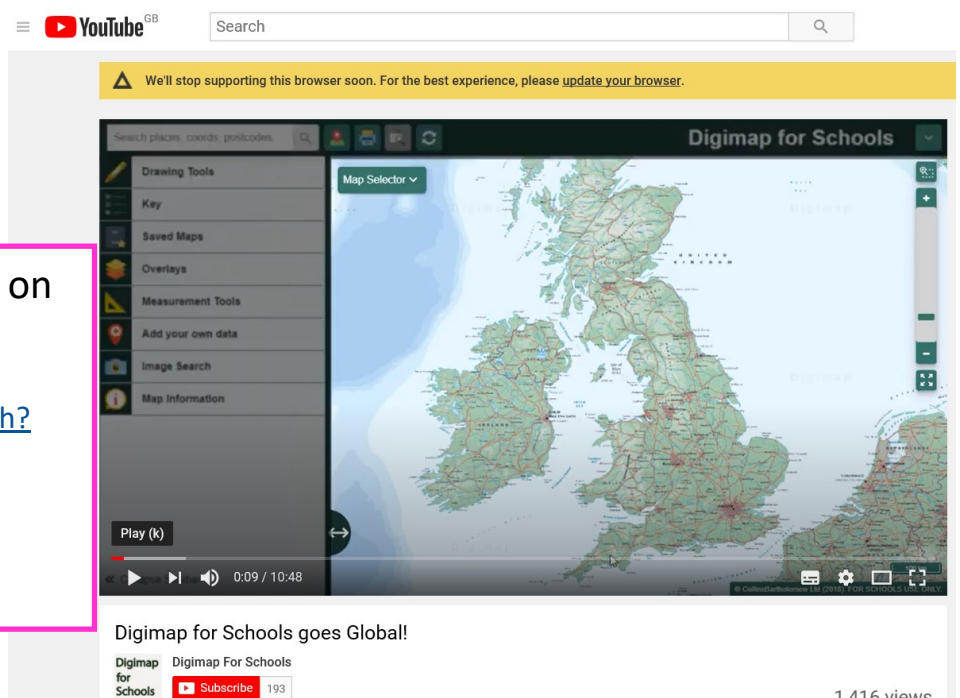

Password:

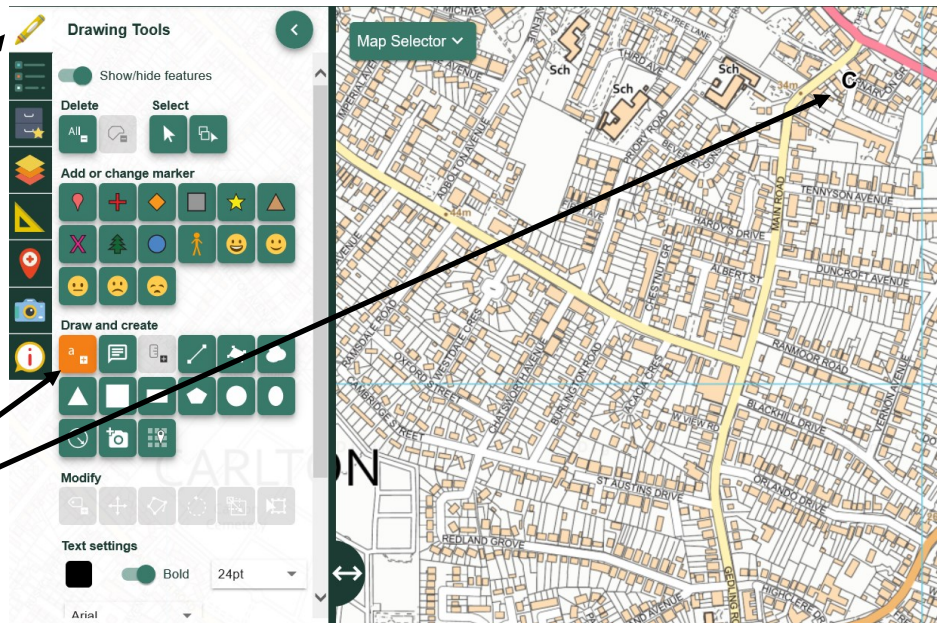

Step 3: watch this video on YouTube

<https://www.youtube.com/watch?v=uAPGzMnd3Ek>

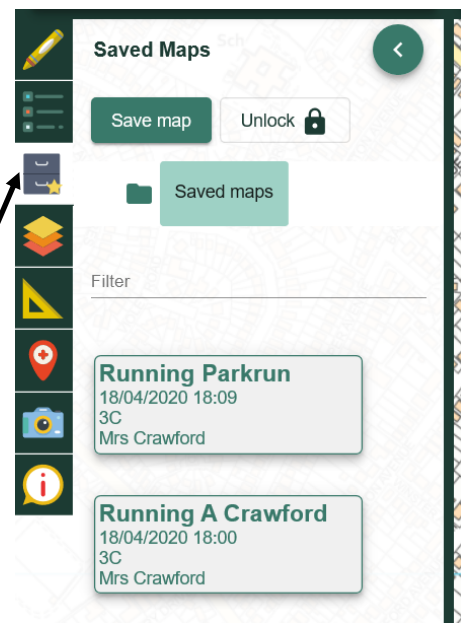

It tells you how to use Digimaps really well.

Step 4: select Drawing Tools and use the label tool (in orange) to mark the roads that spell your name.

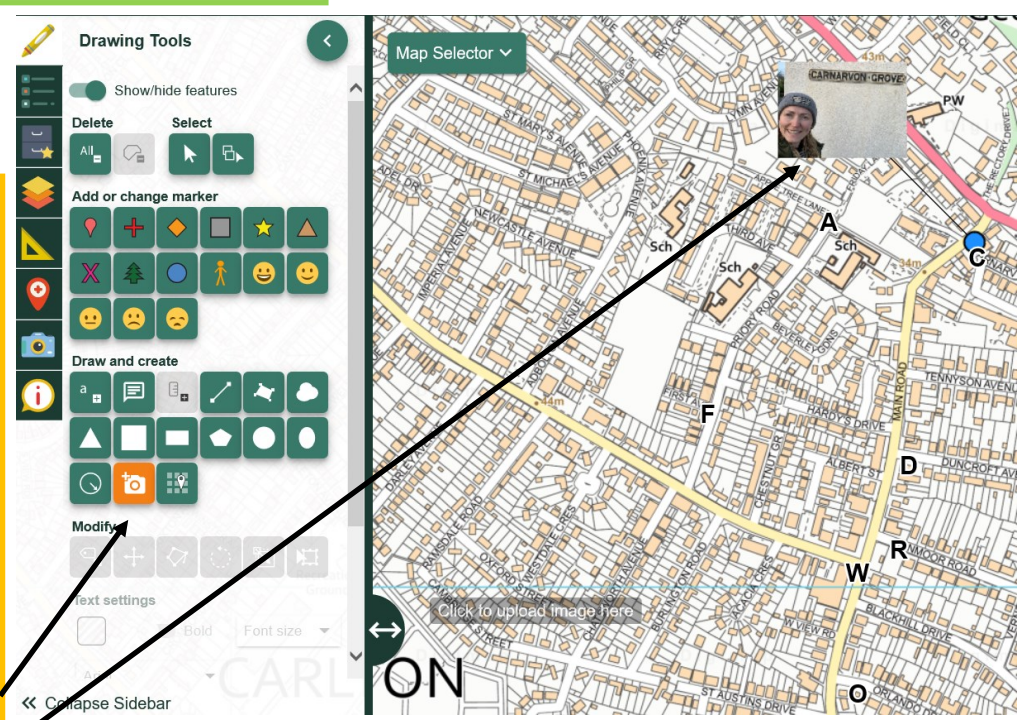

Step 5: save your map under your name. **As this is a school account, all maps will be visible to any child who signs in. Please bear this in mind when saving your data to the map.**

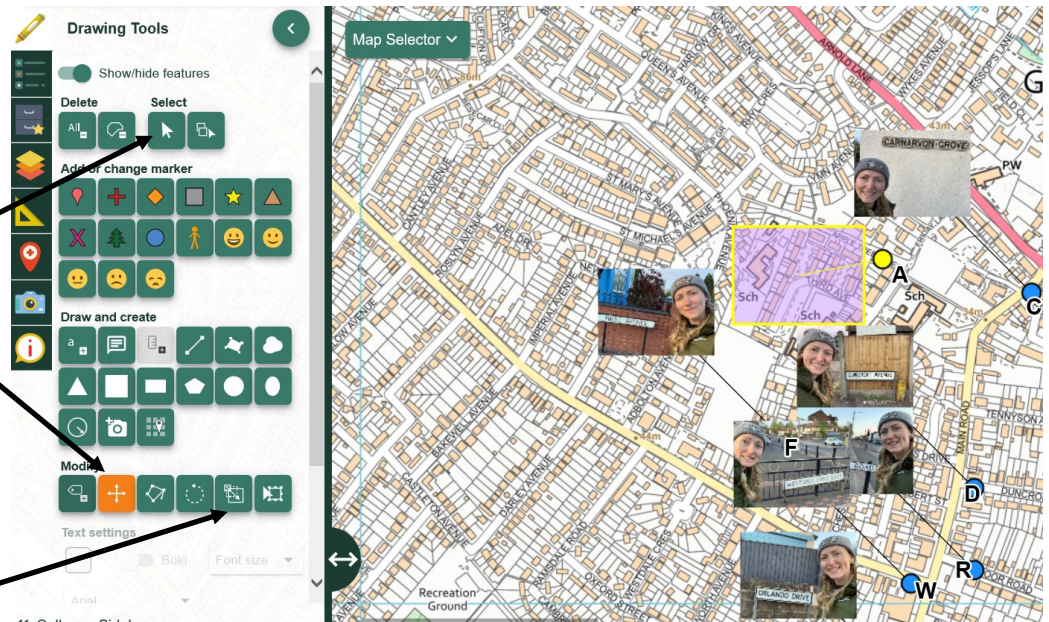

Step 6: walk your route! You can walk, run, hop, jump—it's up to you! Take a photo of each road sign when you get there. You could even take a selfie.

Step 7: when you're back and have had a drink of water, open your map back up and add your photos to your map in the correct places. Use the camera tool (in orange).

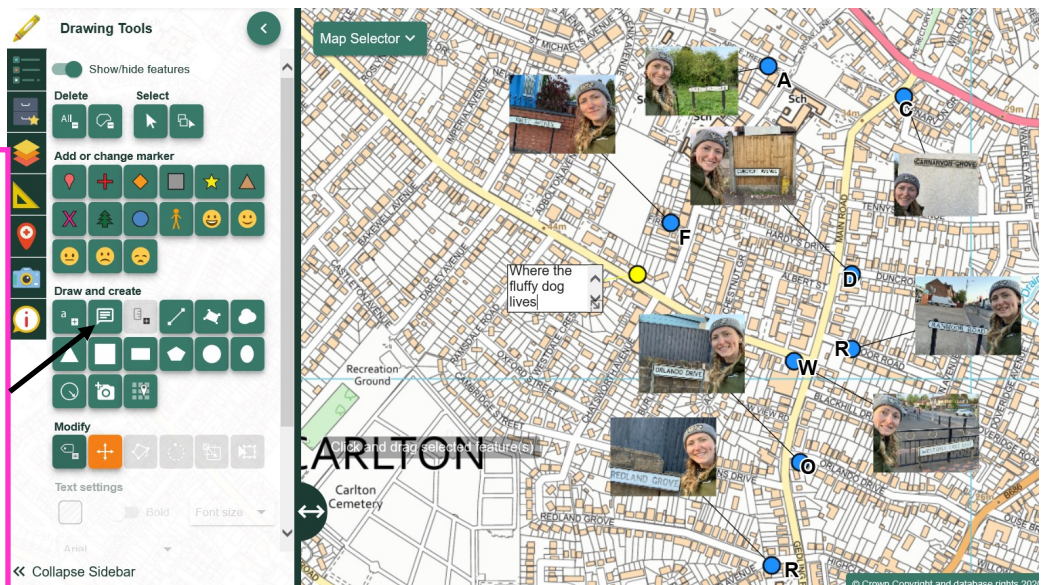

Tip: if your photo gets saved in an annoying place, select it and it will turn purple. Move it using the cross icon (in orange)

You can also resize your picture, if it's too big.

You could add extra detail to your map using this tool. Mrs Crawford has added where the fluffy dog lives. You could label the prettiest garden or your favourite takeaway.

Bonus Challenge!

1. If there's someone you're missing and you can't see them right now, you could spell their name and send them a picture! For example, Aunty Sue or Momma.
2. Use the measuring tool to calculate how far your route is. Could you convert it to metres or miles?

We can't wait to see what you come up with. Have fun!
